

Free CRS

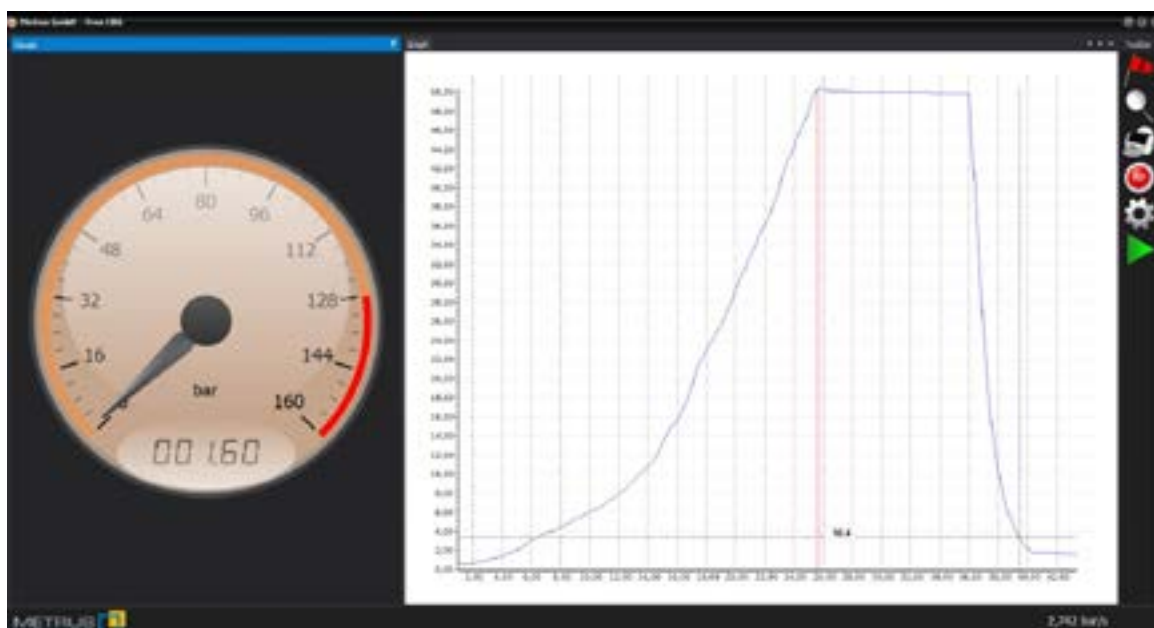

Free of charge CRS Software

Computers have become part of the workshop environment and CRS - Computer Registration Systems - are a standard for test benches today. However, not everyone requires comprehensive solutions with multiple transducers and database integration. In many cases a digital test with report is only needed from time to time and a powerful CRS solution appears to be oversized.

METRUS offers ready to use CRS software free of charge via download from our web site. The only investment required is a pressure transducer you may source from METRUS or directly from WIKA.

Features

- Automatic recognition of WIKA CPT2500 transducers - no setting up of sensor parameters.
- Pressure recording and diagram displaying in real time
- Simple intuitive utilisation
- Automatic maximum pressure identification
- Manual correction of set pressure point
- Printed reports with logo and address
- Direct PDF export of test reports

What you need

■ A computer with a Microsoft-supported version of Windows and one free USB port

■ METRUS Free CRS

WIKA CPT2500
